**Business Overview:**

WSI is a global technology supplier to the gaming industry, providing software, networks and support services for online lottery systems, server-based gaming devices and video lottery terminals. We offer a full range of technology services, including design, assembly, installation, operation and maintenance of its systems.

WSI has a wide experience within the lottery market where it has managed the deployment of traditional online lottery systems for regulated national lotteries across the world.

**Company Profile**

The initial company, WIN, was set up in 1996 to manufacture and operate lottery systems.

The company introduced its first online lottery systems in 1997 and processed billions of transactions in several countries across three continents.

In February 2005, the business was completely restructured. The initial founders and management bought out key assets, including the IP rights and technical expertise, and set up a new company, WIN Systems International, in Delaware.

Anticipating the trend towards server-based systems, the company focused its R&D efforts on developing an innovative platform for the VLT market. The resulting

platform provides a server-based central determination system with downloadable games.

WSI has designed, deployed, and operated profitable systems across the world.

Over the past 10 years, it has continuously evolved, refined and expanded the product line ahead of market demand simultaneously reducing implementation and deployment costs. This has resulted in a profitable operation with a strong base of existing customers, able to support new projects, product enhancements and rapid growth.

### **Products:**

**1. MultiGame™ System:** The most efficient integrated solution for the traditional online regulated lottery markets. It is a complete hardware and software system for intense data transaction that includes modules for Administration, Control and Statistics among others.

**2. WAW™ System (Win Any Where):** An innovative multichannel gaming system designed to support gaming on wireless devices including cell phones, PCs, palm and land lines using Internet, WAP, IVR and SMS technology.

**3. VLT Platform:** First-class server-based platform with downloadable games capability. It comprises two systems:

- **LYKOS™** (Lottery Kiosk Online System) is a state-of-the-art on-line integrated system for the management of electronic instant lottery, pull tabs and Class II games through Video Lottery Terminals (VLT's)
- **WINGS™** (Win Gaming System) is a random number generator (RNG) games management system for Class III, AWP central and local gaming systems allowing the interconnection of slots machines for central supervision, management and Jackpots.

**4. WIGOS™ :** Powerful software package that provides a complete connectivity solution for slot machines and VLT's from different providers for the collection of data, control, auditing, accounting, analysis and data storage in a Central System.

**5. W-BINGOS™:** Successful system for pari-mutuel games in which players acquire pre-defined electronic cards and participate in interactive draws, competing for prizes against each other.  
W-Bingo™ is a centralized server based system that generates, manages and deals cards to players at interactive kiosks or gaming terminals.

**6. W-KENO™:** Centralized server based innovative system for numbers games in which players choose from one to ten numbers from a pool of eighty and participate in an interactive draw. The system provides a number of pre-defined prize categories, allowing the operator of the game to select the prize distribution rules customizing its own and specific application in an easy menu-driven way.
